# Comparing Quadrilaterals

Original shape:

Name of shape: \_\_\_\_\_

Steps used to change the shape:

---

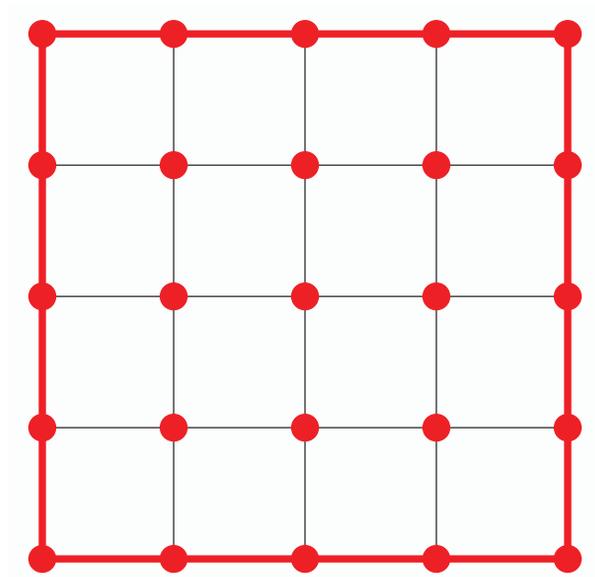

---

---

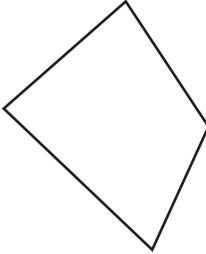

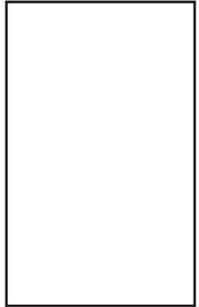

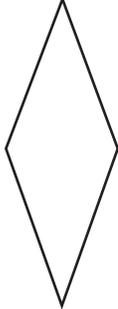

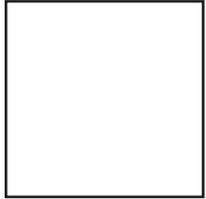

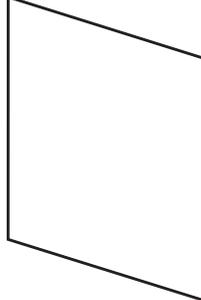

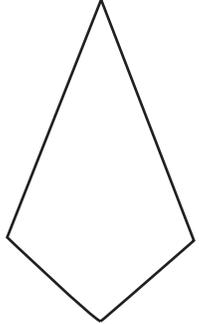

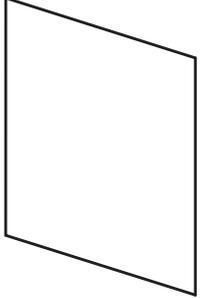

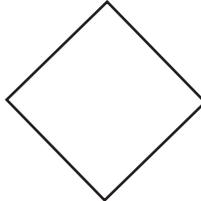

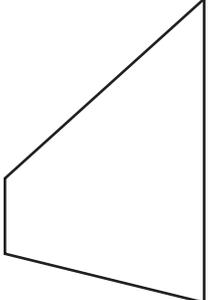

---

New shape:

Name of new shape: \_\_\_\_\_

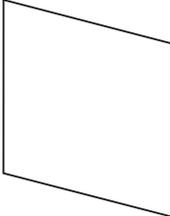

Other quadrilaterals			
Parallelograms (2 pairs of opposite congruent sides)			
			
			
			

Today we created our own quadrilateral and sorted it based on the attributes of the shape. The task is started as an example.

Draw at least 5 examples of each. Some shape ideas are given below; however, some shapes do not belong in this sort at all.

<p>Other quadrilaterals</p>	
<p>Rhombuses (4 congruent sides)</p>	
<p>Rectangles (2 pairs of congruent sides with 4 right angles)</p>
